Vitiligo – What's New with Focus on Surgical Management

Mulekar

Learning Objectives

1. This session will give the attendee an overview of all surgical (conventional & new) techniques & developments.
2. This session will help the attendees to select the technique, to practice depending upon the infrastructure, skills, and affordability of the community.
3. To understand the selection of patients for each technique
4. This session will not impart training, but will make the participants familiar with different techniques.

Conventional medical therapies include PUVA, topical steroids, & topical oxsoralens. Conventional surgical techniques include punch grafting, split thickness grafting, and blister roof grafting. In recent times there are some new modalities of treatment are being developed and used at selective centers. They are targeted phototherapy, topical immunomodulators and cultured & non-cultured cellular grafting.

Surgical therapies will be described step by step with the help of video clips of selected procedures and compared with each other. The selection criteria for the various surgical techniques will be emphasized.
